**A. PERSONAL STATEMENT:** We study the role of intercellular communication in cardiovascular development, and its connection to human disease, particularly congenital heart defects (CHD). In the last several years our group has been studying the role of intercellular signals (ie: NOTCH, BMP2, EPHRINB2, GPR126 and NRG1) in mediating the communication between endocardium-myocardium in cardiovascular development (valves, ventricles and coronaries) or between the heart and placenta, and their implication in congenital heart defects and cardiomyopathy.
